

The Brazilian logic Society will start, as a WLD2023 activity, the video series: "O primeiro EBL a gente nunca esquece", telling stories about the Brazilian Logic Conference (EBL).

EBL is the main event organized by the Brazilian Logic Society (SBL) and has been occurring since 1979. The EBL congregates logicians of different fields and the meeting is an important moment for the Brazilian and South-American community to come together and engage in a discussion about the state-of-art of their subject. The areas of Logic covered spread over Foundations and Philosophy of Science, Mathematics, Computer Science, Informatics, Linguistics, and Artificial Intelligence.

The goal of the EBL meeting is to encourage the dissemination and discussion of research papers in Logic in a broad sense. The goal of this series is to disseminate experiences in EBL.

The video series will be hosted at SBL's Youtube channel. This is the link:
